George Washington Carver

Matt Doeden

Garden of Praise: George Washington Carver Biography

George Washington Carver was a world-famous chemist who made important agricultural discoveries and inventions. His research on peanuts, sweet potatoes, sorghum, and soybeans led to numerous new uses for these crops. Carver developed hundreds of products from peanuts alone, including peanut butter, which he invented in 1918.

Carver was born in Missouri around 1864. A frail, sickly child, Carver was unable to work in the fields. He was never able to attend school, but he learned by reading and observing. Carver developed a strong interest in science and agriculture, and he became a botanist and chemist.

Carver's work at Tuskegee Institute

In 1896, Carver was hired by Booker T. Washington to teach agriculture at Tuskegee Institute in Alabama. Carver soon became one of the most respected scientists in the world. He was known for his dedication to helping farmers and for his ability to make complex agricultural concepts accessible to the general public.

Carver's contributions

Carver's most famous invention, peanut butter, was developed during his time at Tuskegee. He also developed hundreds of other products from peanuts, including vanaspati, a type of condensed milk, and peanut oil, which was used to make margarine.

Carver's life and legacy

Carver's life was marked by challenges and triumphs. He was a slave until he was 14 years old, and he was never able to attend school. However, he taught himself and became one of the world's most important scientists. Carver's work has had a lasting impact on agriculture and food production.
