Indonesia, The Challenge Of Urbanization

Andrew Marshall Hamer; Andrew D Steer; David G Williams

Urbanization and development of urban economic activities are still challenges at different stages of urbanization. "No country has grown to a medium-sized city without passing through some of the problems that are widespread in urban areas." - Andrew Marshall Hamer.

The rapid acceleration of urbanization, especially in developing countries such as Indonesia, has been accompanied by significant challenges. Urban areas are characterized by high population density, rapid urban growth, and limited availability of basic services such as water and sanitation.

Indonesia, being one of the most urbanized countries globally, faces unique challenges in managing its urbanization. The country's urban population is growing rapidly, and almost 40 million residents will be added to its cities in the last two decades of the 21st century. The Green Revolution in Asia - Asian Development Bank English title: Indonesia: the challenge of urbanization. Serial: World Bank Staff Working Papers (IBRD), no. 787. Authors: Hamer, A.M.; Steer, A.D.; Williams, D.G.. Indonesia's Urban Development 1 Oct 2014.

The urbanization rate also showed that Indonesia had the most rapid growth compared to other countries in Asia. Such growth was influenced by the challenge of urbanization and the need for urban infrastructure. In July this year, the people of Indonesia elected the 53 years old Joko Widodo as the president, indicating a new era for the country.

In relation to urbanization around the world, Indonesia is also experiencing various problems of urbanization and population density, especially in the urban areas. Indonesia's urban population is growing rapidly, with almost 40 million residents added to its cities in the last two decades of the 21st century.
