3 Sep 2010 . There are two kinds of memory — short-term and long-term. Short-term memory is the kind of memory our brain uses to store small pieces of short-term memory. Short-term memory has a limited capacity and duration. Long-term memory, on the other hand, allows us to store and retrieve information over a longer period.

Cognitive psychology is the study of mental processes such as attention, language use, memory, perception, problem solving, creativity, and thinking. Much of cognitive psychology is concerned with how we process and remember information.
