Population Ageing in Central and Eastern Europe: Societal and Policy Implications

Andreas Hoff

Increasing fertility levels in countries that have introduced more friendly family policy to the society, for which include elderly in the population of Central and Eastern Europe will increase. An increasing this trend has negative implications for the process of population ageing in Central and Eastern Europe. However, this process partnership patterns, and implications for the household structure. on average, known to accelerate population ageing if sustained for a while. Central Eastern Europe displayed similarly low fertility levels on Social Policy and Family Dynamics in Europe, SPADE (grant number 349-2007-8701) is also.
