Problem Solving With BASIC

Leslie J. Cake ; Daniel Stewart

Problem-Solving Process
The Problem Solving process consists of a sequence of sections that fit together. The normal process for solving a problem will initially involve defining the Problem-Solving Steps & Process. The Problem Solving process involves the following basic steps:

1. Identify the problem.
2. Gather information.
3. Develop solutions.
4. Evaluate solutions.
5. Implement the solution.
6. Monitor the results.

These steps provide a framework for solving problems in a systematic and organized manner. By following these steps, you can approach problems in a structured way, improving your chances of finding effective solutions.
