Temperate forest - Wikipedia, the free encyclopedia

Temperate deciduous forests are most notable because they go through four seasons. Leaves change color in autumn, fall off in the winter, and grow back in the spring. Temperate forests are in between the other land biomes. In fact, the word temperate means not extreme. They are warmer and more diverse than tropical rainforests.

Temperate deciduous forest biome is characterized by its leaf-shedding trees and its seasons. This biome experiences all four seasons - winter, spring, summer, and fall. Animals and plants have special adaptations to cope with these changes. Temperate deciduous forests are found within the temperate latitudes, just like... In the same way that the Earth can be classified into separate biomes, where deciduous biomes are located primarily in the eastern half of the United States, Canada, Europe, parts of Russia, China, and Japan.

Climate. The average temperature of the forest is about 50 degrees F. The average amount of rainfall in the forest is 30 to 60 inches a year. Temperate Forest Biome ASU - Ask A Biologist
